

Math Summer Pack – Instructions

Dear future 9 grader,

Welcome to St. Stephen's Math!

Here is your Summer Pack that contains some math related activities to help you from getting too "rusty" over the summer break and to help us getting to know you a little better math-wise, so that we will be able to start the next academic year in the best possible way.

This Summer Pack is divided in two parts:

- 1) Self Assessment – We are asking you to rate your "math confidence" over a number of topics that you might (or might not!) have covered in middle school. Please, it is **very important** that you are **honest** and **realistic** in filling it. Remember that this self assessment is in no way some sort of grade, nor will it be considered in your future assessments. If you do not feel confident in a certain topic or have never studied it in middle school, no problem! We just would like to know it so that we can better plan our first lessons. If you don't know what a certain topic is exactly about, just look at the examples in the worksheet (see point 3). Print the Self Assessment and bring it to school!

2) Worksheet – As the name says... it's a worksheet with some exercises covering the topics you found on the Self Assessment.

3)

That should be all, we hope everything is clear.

Have a wonderful and restful summer, you have deserved it! See you in September!

The St. Stephen's Math Team
